1. PRODUCT NAME
Belzona® 1311
(Ceramic R-Metal)
Repair system designed for rebuilding metals damaged by erosion-corrosion.

2. MANUFACTURER
Belzona Inc.,
2000 N.W. 88th Court
Miami, Florida 33172

Belzona Polymerics Ltd.,
Claro Road, Harrogate,
HG1 4AY, England.

3. PRODUCT DESCRIPTION
A two-component, non-machinable grade material based on a silicon-steel alloy blended within high molecular weight reactive polymers and oligomers. The system is designed for rebuilding metals and offers protection against the effects of erosion-corrosion. Ideally suited to be overcoated with Belzona® 1321 (Ceramic S-Metal).

Applications
Centrifugal and turbine pumps.
Heat exchangers, water box ends, division bars and tube sheets.
Butterfly and gate valves.
Propellers.
Kort nozzles.
Bow thrusters.
Pipe elbows.
T-pieces.

- **Shelf Life:** Separate base and solidifier components shall have a 5 year shelf life when stored between 32°F (0°C) and 86°F (30°C).

- **Working Life:** Will vary according to temperature. At 77°F (25°C) the usable life of mixed material is 15 minutes.

- **Volume Capacity:** The volume capacity of a 1 kg unit of mixed Belzona® 1311 is 25.2 in.³ (413 cm³).

- **Cure Time:**
Allow to solidify for the times shown in the chart below before subjecting it to the conditions indicated.

5. PHYSICAL / MECHANICAL PROPERTIES

Determined after 7 days cure at 77°F (25°C). Post curing the material with heat results in a more highly cross-linked polymer. For enhanced performance this material may be post-cured by heating to 212°F (100°C) for a period of up to 24 hours. This should be carried out following an initial cure period of 24 hours at ambient temperature.

- **Abrasion Resistance:**
Taber
The Taber abrasion resistance with 1 kg load is typically:
H10 Wheels (Wet) 129 mm³
CS17 Wheels (Dry) 48 mm³
loss per 1000 cycles

- **Adhesion:**
Tensile Shear
When tested in accordance with ASTM D1002, using degreased substrates which have been grit blasted to a 3-4 mil profile, typical values will be,
Mild steel 2,700 psi (190 kgs/cm²)
Brass 2,270 psi (160 kgs/cm²)
Copper 2,200 psi (155 kgs/cm²)
Stainless steel 2,800 psi (196 kgs/cm²)
Aluminium 2,000 psi (140 kgs/cm²)

- **Chemical Resistance:** Once fully cured, the material will demonstrate excellent resistance to the following chemicals:
carbonic acid
10% hydrobromic acid
10% hydrochloric acid
10% nitric acid
20% nitrous acid
5% phosphoric acid
10% sulfuric acid
20% ammonia solution

lime water
20% potassium hydroxide
20% sodium hydroxide
propanol
butanol
ethyleneglycol
diethanolamine
methylamine (25% in water)
hydrocarbons
mineral oils
inorganic salts

* For a more detailed description of chemical resistance properties, refer to Product Data M501.

**Compressive Strength:**
When tested in accordance with ASTM D695, typical values obtained will be 13,000 psi (914 kgs/cm²).

**Corrosion Resistance:**
Once fully cured, will show no visible signs of corrosion after 5,000 hours exposure in the ASTM B117-73 salt spray cabinet.

**Electrical Properties:**
- **Dielectric Constant**
  Tested to ASTM D150 is typically 3.29 at 1000Hz
- **Dielectric Strength**
  Tested to ASTM D149 is typically 32 volts/mil (1280 volts/mm).
- **Dissipation Factor**
  Tested to ASTM D150 is typically < 0.0005 at 1 MHz
- **Surface Resistivity**
  Tested to ASTM D257 is typically 5.76 x 10⁸ ohm.
- **Volume Resistivity**
  Tested to ASTM D257 is typically 1.03 x 10⁹ ohm.cm.

**Flexural Strength:**
When tested to ASTM D790, typical values obtained will be 10,000 psi (703 kgs/cm²).

**Hardness:**
The hardness of the material when tested to ASTM D785 is typically Rockwell R104.

**Heat Distortion Temperature:**
Tested to ASTM D648 (264 psi fiber stress), typical values obtained will be 136°F (58°C).

**Heat Resistance:**
For many typical applications, the product is thermally stable to 392°F (200°C) dry and 200°F (93°C) wet.

**Impact Strength:**
Reverse notched impact strength is typically 0.93 ft.lb./in. or 50 J/m.

**Shrinkage:**
0.0% minimum
0.005% maximum

**Thermal Expansion:**
Tested to ASTM E228 the coefficient of thermal expansion is typically 35.5 ppm/oC.

6. **SURFACE PREPARATION AND APPLICATION PROCEDURES**
For proper technique, refer to the Belzona Instructions for Use leaflet which is enclosed with each packaged product. Areas rebuilt with Belzona® 1311 may be overcoated with Belzona® 1321 (Ceramic S-Metal)

7. **AVAILABILITY AND COST**
Belzona® 1311 is available from a network of Belzona® Distributors throughout the world for prompt delivery to the application site. For information, consult the Belzona® Distributor in your area.

8. **WARRANTY**
Belzona® guarantees this product will meet the performance claims stated herein when material is stored and used as instructed in the Belzona® Instructions for Use leaflet. Belzona® further guarantees that all its products are carefully manufactured to ensure the highest quality possible and tested strictly in accordance with universally recognised standards (ASTM, ANSI, BS, DIN, etc.). Since Belzona® has no control over the use of the product described herein, no warranty for any application can be given.

9. **TECHNICAL SERVICES**
Complete technical assistance is available and includes fully trained Technical Consultants, technical service personnel and fully staffed research, development and quality control laboratories.

10. **HEALTH AND SAFETY**
Prior to using this material, please consult the relevant Material Safety Data Sheets.
